

Decision support systems assignment

AHMED MAHFOOZ ALI KHAN(BTHBI338)

Problem statement: To design a decision support system that helps travellers decide upon a travel plan that helps them reach Karlskrona from Copenhagen airport as soon as possible while also satisfying conditions such as less time, money, and ease of travel.

1. Introduction: Designing a Decision Support System for Efficient Travel from Copenhagen Airport to Karlskrona.

2. Target Users: Travellers including students, tourists, and entrepreneurs seeking to optimise time and cost.

3. Data Sources: Utilizing data from **Blekingetrafiken**, Google Maps, Apple Maps, and local transportation services.

4. System Development: utilising a programming language or software tool that may integrate artificial intelligence for improved decision-making.

5. Accessibility: Ensuring accessibility across all platforms for user convenience.

6. Transportation Options: Providing various transportation modes such as aircraft, bus, train, vehicle, or ferry prioritizing speed.

7. Logistics Processing: Consideration of logistics including ticket prices, departure times, and operator policies with regular updates.

8. Ticket Purchase: Offering users options for purchasing tickets either in person or online.

9. Payment Methods: displaying the available payment methods, along with currency options, such as cash, cards, and digital wallets.

10. Maintenance and Monitoring: Regular updates, user feedback incorporation, security enhancements, and algorithm optimisation to ensure smooth functioning and privacy protection.

11. Contingency Measures: putting policies in place to deal with circumstances in which the algorithm is unable to deliver the best course of action.
